

## Using Augmented Reality you can make your design come to you.

Picture an immersive design review where you could experience your product at scale, one where a single click summoned a 3D representation of your product. Then you could explain your ideas to others more easily and find issues – or opportunities – earlier in the design process. And go on to share your design with anyone in the world.

Augmented Reality (AR), is engaging, immersive, and simple. We've integrated Creo with Vuforia, our world-leading AR platform, so you can author and publish an AR experience right from Creo with a few clicks.

No programming skills needed.

Download the Thingworx View app, print the Gallery Experience ThingMark, and see the power of AR and ThingWorx Studio. Search for "ThingWorx View" in the Apple Store, Google Play or the Microsoft App Store.
